

The Water Cycle

Almost all the water on Earth is _____ (97%).

Of the three percent that is fresh water, _____% is frozen in the ice caps at the poles.

Most of the fresh water that is not frozen is _____.

The water that falls as precipitation sinks into the ground (infiltration) and eventually reaches a layer it cannot pass through.

The Water Cycle: Continuous process by which water moves through the _____ and _____ parts of the environment. The water cycle is driven by the _____.

Evaporation:

Condensation (clouds) :

Precipitation:

Surface Runoff:

Infiltration:

Groundwater:

Transpiration:

The same water is cycled over and over.

Carbon Cycle

Carbon (as CO₂) is converted by...

Carbon (as CO₂) is released by...
